

I am a versatile data-focused engineer with full-stack development experience crafting web applications, backend systems, and data-driven workflows. I have experience in collecting, processing, and structuring data through APIs, SQL systems, and custom applications, while also reporting, visualizing, and being a part of operational decision-making. I bring a strong foundation in scalable system design, data integrity, and converting technical solutions into business value.

EXPERIENCE

Software Engineer (Contracted)

Pan African Film & Arts Festival | Mobile and Web Application | Dec 2023 – May 2024

- Implemented SEO and accessibility best practices, including image optimization, intuitive navigation to improve discoverability, and inclusive user experience.
- Enhanced application performance by refactoring code and optimizing data ingestion, cleaning and workflows, producing structured dataset for Power BI dashboards and reporting.
- Designed and launched a favorites/bookmarking feature with supporting RESTful APIs to capture and structure user engagement data, allowing for downstream analysis and data-driven product decisions.

Software Engineer (Contracted)

Goodnewsy | Web-Based Trivia Game | Jun 2024 – July 2025

- Built a custom WordPress plugin that served as an admin dashboard for uploading and managing daily trivia questions, creating a content pipeline between internal operations and the game experience.
- Engineered a backend workflow that delivered daily game content, uploaded from the admin dashboard, through a scalable web application.
- Developed a backend system for user authentication and progression tracking that captured user activity data to support engagement analysis.
- Implemented a raffle entry workflow that monitored participant data and supported engagement-focused reward tracking.

Software Engineer (Contracted)

University of Personal Fitness | Data Management System | April 2022 - Nov 2023

- Built and deployed a custom client-management web application to centralize, process, and standardize member data, streamlining administrative workflows and improving record consistency.
- Implemented a progression-tracking workflow to maintain up-to-date student records while maintaining clean and accurate data.
- Integrated secure authentication and data protection to safeguard sensitive information and support responsible data management.

Relevant Project

Donation Integration System

Passion Project | 2022

- Integrated PayPal's donation API to process transaction data, creating a reliable pipeline for financial and user engagement.
- Automated user account updates via scripts, ensuring data integrity and real-time synchronization of donor status and rewards.
- Designed and managed the SQL database to store donation history and user activity.

Education

BA in Computer Science

University of South Carolina | 2019 – 2023

Minor in Business

University of South Carolina | 2019 - 2023

Google Android Studio Developer

University of South Carolina | Certification | 2022

Soft Skills
