

ABDULLAH BUENO

FULL STACK | SOFTWARE ENGINEER

I am a versatile Full-Stack Developer with proven experience crafting both web and mobile applications. Having experience in the full development lifecycle of a production level application gives me a strong foundation to not only build features effectively but also to understand the broader implications of technical choices on performance, scalability, and the end user experience, ensuring the delivery of high-quality products.

EXPERIENCE

Software Engineer (Part Time)

Binary Holdings Group | Dec 2023 – April 2026

- Designed and deployed an internal email server with SSL/TLS certificate authority configuration.
- Configured and maintained an Nginx reverse proxy server to route and expose RESTful and SOAP API integrations across multiple project stacks, simulating real-time middleware traffic management for prototype environments.
- Enforced secure data delivery through API gateway configuration, applying encryption standards, credential management, and authentication schemes across deployment pipelines.
- Consulted directly with clients to gather and scope backend integration requirements, translating business needs into structured API and service architecture specifications supporting cross-system data flows.

Software Engineer (Contracted)

Binary Holdings Group | PAFF.org | Dec 2023 – May 2024; Nov 2024 – April 2026

- Designed the UI/UX of the mobile with the web experience.
- Configured and maintained a Nginx reverse proxy server to route and expose RESTful and SOAP API integrations across multiple project stacks, simulating real-time middleware traffic management for prototype environments.
- Optimized performance through code refactoring and data handling techniques to reduce load times and efficient data handling.
- Developed a favorites/bookmarking feature with supporting RESTful API endpoints.

Software Engineer (Contracted)

Binary Holdings Group | Web-Based Trivia Game | Jun 2024 – July 2025

- Developed two prototypes (v1 in Phaser; v2 rewritten in Next.js with Tailwind CSS).
- Engineered a scalable backend using SQL and a custom WordPress plugin for an admin interface.
- Set up AWS deployment pipelines and Cloudflare CDN for fast, global delivery.
- Refined v2 UX/UI improving game flow, clarity, visual feedback, and responsive interactions across screen sizes.

Software Engineer (Contracted)

University of Personal Fitness | Columbia, SC | Dec 2023 – May 2024; Nov 2024 – April 2026

- Deployed a serverless Node.js backend using NESTJS on Google Cloud Functions, managing client data, administrative authentication, student belt progression tracking, class attendance.
- Built and deployed a custom Ionic web application, providing instructors with centralized client management and administrative tools.
- Developed a secure belt progression and testing platform featuring role-based authentication, rank advancement tracking, automated test generation for students across all belt levels, and persistent storage of test results and performance metadata in a database

Education

BA in Computer Science

University of South Carolina | 2019 – 2023

Minor in Business

University of South Carolina | 2019 - 2023

Google Android Studio Developer

University of South Carolina | Certification | 2022

Skills

Attention to Detail
Time Management
Critical Thinking
Problem Solving
Communication
Creative Thinking
Adaptability

Technologies

JavaScript/TypeScript	React
Java	Angular
C++	NextJS
C#	Node
SQL	Git
Kotlin	Google Cloud
PHP	
Python
